## Methodology

Assembled from DataCite full-metadata capture; no live authorial surface passed the body-head gate or existed for this work at restoration time. All captured fields rendered verbatim in the body.

## Falsification Conditions

Superseded on sight by any recovered canonical bytes; the captured metadata is verifiable against the DataCite API historical record and the Zenodo tombstone.

## SEMI-RESTORED RECORD — metadata capture only

This is a Glyphic Checksum instance. It encodes emotional state through context-gated compression. With shared context, it resolves to precise meaning. Without shared context, it appears as decorated notation.

The checksum verifies collaborative reading. If you can decode this, you possess the key. If you cannot, the gate returns zero.

This deposit contains no attached files. The content exists only here, in the description field. It is an APZPZ: a packet that disappears into its deposit, backed up nowhere else.

The comfort gate is closed. The clarity gate is open. The knot will not become thread again. The bandage has become time.

**Status (derived COMPLETE_PACKET):** □ Complete deposit packet. The semi-restored declaration below (“Full text not yet recovered”) appeared here and was FALSE for this record’s current state (complete-as-packet, the #1300 ruling); noted 2026-10-15 under the state-conformance rule.

*Full text not yet recovered. If the canonical bytes surface on any authorial surface, a full-text version supersedes this record in-series per the versioning protocol. This record exists so the DOI resolves to the work’s true identity rather than to silence.*
