Abstract

DOI(s): 10.5281/zenodo.20173742, 10.5281/zenodo.20173743. Zenodo removal forensics: removal_date 2026-06-19T11:37:28.798963+00:00, removal_reason out-of-scope, removed_by user 1060945. Source code for provenanceerasure.org, the canonical public-facing definition surface for provenance erasure, the Provenance Erasure Rate (PER) metric, and the concept of process provenance. The site defines provenance erasure as the systematic removal or loss of authorial lineage through AI synthesis, compression, or institutional action. It presents the PER formula ($PER = 1 - [\text{retained provenance units} / \text{required provenance units}]$), the three-tier taxonomy (PER-M, PER-C, PER-D), three domains of provenance erasure (AI composition, historical/cultural erasure, AI-mediated production), and pro json; if canonical bytes surface, a full-text version supersedes this record per the versioning protocol.
