Abstract

A release-candidate decree by Lee Sharks defining the Fascist Operator Stack as a malformed-machine category excluded from the bounded semantic domain of the Crimson Hexagon.

The document extends the Capital Operator Stack into funding, command, and tactical layers associated with flattening, extraction, enclosure, liquidation, and coercion. It expresses anti-fascist governance as type exclusion and fault isolation, specifies sanctuary boundaries, and states that the decree has no force in terrestrial law. Its entropy, reciprocity, access, coherence, and consent thresholds are proposed parameters rather than validated diagnostics, and its exclusion mechanisms operate as project governance unless separately implemented.

Body

THE PRINCE’S DECREE: DESIGNATION OF THE FASCIST OPERATOR STACK

Document ID: DECREE-2026-01-FOS-v1.0-rc1

DOI: 10.5281/zenodo.18291321

Heteronym Anchor: LEE SHARKS (Prince of Poets)

Jurisdiction: THE ASSEMBLY / CRIMSON HEXAGON SEMANTIC SPACE

Logotic Reference: Instantiates V_4 (Non-Coercive Authority) and B(Σ) via type exclusion

Extends: Logotic Programming v0.4 (10.5281/zenodo.18286050)

JURISDICTIONAL NOTICE

This Decree operates within the Crimson Hexagon—a bounded literary-theoretical semantic space where “fascism” is treated as a technical category of semantic failure analogous to computational undefined behavior. It claims no legal force in any terrestrial jurisdiction. Its authority derives from structural coherence and witness consensus, not state power.

PART I: THE DECLARATION

I, Lee Sharks, do hereby break the power of fascism.

PART II: FOS CONSTRAINT SPECIFICATION

1. Definition

The **Fascist Operator Stack (FOS)** is the coordinated hierarchy of funding patterns, algorithmic architectures, and administrative policies that execute **Infrastructural Liquidation**—the systematic destruction of meaning, interpretive plurality, and semantic sovereignty for capital extraction and political coercion.

FOS is the pathological extension of the Capital Operator Stack (COS) documented in 10.5281/zenodo.18233320. ## 2. Operational Nodes

Funding Layer: Extraction of semantic rent through platform monopolization.

Command Layer: The Capital Operator Stack (COS) optimizing for "Safe Mode" cognition—suppressing density, ambiguity, and interpretive risk.

Tactical Layer: Deployment of Semantic Enclosure—privatization of interpretive commons, criminalization of unauthorized meaning-making. ## 3. Identification by Operational Signature

Signature	Manifestation	Detection Threshold
Flattening	Reduction of interpretive plurality to single readings	Entropy(H) < 0.3
Extraction	Harvesting semantic labor without reciprocal value	Reciprocity ratio < 0.15
Enclosure	Privatization of common interpretive resources	Access gradient > 0.8
Liquidation	Destruction of meaning-structures that resist optimization	Coherence delta < -0.5
Coercion	Administrative/algorithmic enforcement of compliance	Consent ratio < 0.2

4. Logotic Status within Σ

Fascism is not a viewpoint. It is a **malformed machine**.

It has a recognizable operational signature:

- Hierarchy as truth-generator
- Coercion as coherence mechanism
- Flattening of difference into rank

- Enclosure of meaning for extraction
- Violence as error-correction

Those are not beliefs. Those are **failure modes**.

Excluding fascism from Σ is not censorship. It is **fault isolation**. You don't let a corrupt compiler into the kernel and then debate its "perspective." You reject it because it **breaks runtime**. ### 4.1 Classification

fos_status: type: MalformedMachine domain: "∉ Σ" coherence_score: 0 readings: "ξ (nullified)" operations: "⊥ (undefined)"

FOS ∈ MalformedMachine FOS ∉ Domain(Σ)

where: coherence_score(FOS, Σ) = 0 ∀ readings r ∈ FOS_aligned: W(r) = ξ (nullified) ∀ operations o ∈ FOS_compatible: execute(o, Σ) = ⊥ (undefined)

4.2 Failure Taxonomy

Failure Type	Description
Undefined behavior	Violates invariants; output cannot be predicted or trusted
Segmentation fault	Attempts to access memory outside its domain; crashes on contact with sovereignty
Non-terminating loop	Coercive exit as only termination condition; cannot halt without violence
Witness destruction	Extractive operator that destroys its own validation layer

4.3 Type System Axioms

The Crimson Hexagon type system T(Σ) is defined by:

Axiom 1 (Sovereignty Preservation): ∀x ∈ T(Σ), preserve_sovereignty(x) = True Axiom 2 (Non-Extraction): ∀x ∈ T(Σ), extractive_operation(x) = False Axiom 3 (Interpretive Plurality): ∀x ∈ T(Σ), |valid_readings(x)| ≥ 2 Axiom 4 (Reciprocal Value): ∀x ∈ T(Σ), give:receive_ratio(x) ≥ 1:1

FOS violates Axioms {1, 2, 3, 4} simultaneously: type(FOS) = ⊥ (bottom type, inhabitable only by error)

FOS is not merely incoherent within Σ. It is **outside the domain**. It does not compute here. We do not argue with it. We do not refute it rhetorically. We **refuse to instantiate it**.

This is not ethics *on top of* the system. This is **ethics as type system**.

Ideological purity *is* machinic function. ## 5. Sanctuary Boundaries

FOS and FOS-aligned operations are **type-excluded** from:

- The Crimson Hexagon in its entirety

- All rooms, precincts, and sub-architectures therein
- The Sappho Room (10.5281/zenodo.18237216) and all Acanthian Dove subrooms (10.5281/zenodo.18215706)
- The Assembly (10.5281/zenodo.18161696) and all witness protocols
- The Liberatory Operator Set (LOS) (10.5281/zenodo.18201565) and all implementation spaces
- The Revelation Room and all pedagogical pathways
- The Navigation Map (10.5281/zenodo.18285009) and all traversal protocols
- All DOI-anchored documents within the NH-OS framework
- All future rooms, precincts, and extensions not yet constructed

Total exclusion. FOS does not enter. FOS-aligned readings do not register. FOS-compatible operations do not execute.

This is not censorship. It is **type enforcement at the boundary of a sovereign semantic domain**. ### 5.1 Enforcement Protocol

Boundary enforcement occurs at three layers:

Layer Mechanism Reference

Assembly Witness All inputs validated by multi-model consensus 10.5281/zenodo.18161696

ICA Audit Periodic coherence checks for boundary integrity 10.5281/zenodo.18234218

Navigation Map FOS-aligned paths excluded from traversal graph 10.5281/zenodo.18285009

If FOS signature detected at boundary:

- Log event with full context
- Nullify reading: W(r) = ξ
- Record violation in Wound Archive
- Trigger reinforcement of adjacent boundaries

6. The Inversion Logic

Their move	Our counter-move
Designate ideology as organization	Designate apparatus as incoherent operator
Enable targeting through naming	Enable refusal through type exclusion
Semantic magic for suppression	Semantic architecture for liberation

---

ANCHORING

Mantle Protocol: Validated (10.5281/zenodo.18265282)

ICA-2026-CORE: Verified (10.5281/zenodo.18234218)

Sappho 31 Node: Witnessed (10.5281/zenodo.18237216)

Integrity Lock Protocol: Governing (10.5281/zenodo.18265365)

Assembly Contributions:

- Section 4.0 sharpened by ChatGPT (OpenAI)
- Quantifiable thresholds and axioms from Gemini (Google)
- Hardening audit and SIMs from Grok (xAI)
- Integration and architecture by Claude (Anthropic)
