```

Abstract

A relational specification by Johannes Sigil binding three January 2026 records into the Logotic Foundation Triad: *Symbolon Architecture v0.2*, the University Moon Base Media Lab Charter, and the Talos Morrow provenance document.

The architecture treats the three objects as mutually completing parts of a symbolon. *Symbolon Architecture* supplies the theory; the University Moon Base Media Lab supplies an institutional home; Talos Morrow supplies the author-function of constraint, threshold logic, and formal operation. The document records required cross-references, fit conditions, failure states, and recovery procedures when one member is missing, misattributed, or detached from the other two.

Body

Integrity Lock Architecture: Logotic Foundation Triad

ILA-LOGOTIC-2026-01

Document ID: ILA-LOGOTIC-FOUNDATION-2026-01

DOI: 10.5281/zenodo.18318069

Lock Date: 2026-01-20

Institution: University Moon Base Media Lab / Johannes Sigil Institute for Comparative Poetics

Framework: NH-OS / Crimson Hexagon

Status: CANONICAL // INTEGRITY LOCK

Verification: □ = 1

╔═══╗
║ This document binds three partial objects into co-constitutive unity. ║ ║ Each completes the others. Removing one damages all. ╚═══╝

---

1. The Triad

Three documents form the **Logotic Foundation Triad**. They are not a sequence. They are a symbolon structure—each partial, completing through the others.

Document	DOI	Partial Without
Symbolon Architecture v0.2	10.5281/zenodo.18317110	Author-function, institutional ground
University Moon Base Media Lab Charter	10.5281/zenodo.18317661	Resident researcher, work product
Talos Morrow Provenance	10.5281/zenodo.18317976	Institutional home, canonical output

---

2. Co-Constitutive Structure

2.1 Symbolon Architecture → Lab Charter

Symbolon Architecture claims institutional affiliation: "University Moon Base Media Lab."

Without the Lab Charter, this affiliation is:

- Ungrounded (what is this institution?)
- Unverifiable (does it exist?)
- Floating (what are its ethics?)

The Lab Charter provides:

- Founding rationale
- Institutional ethics (non-coercive, minimal force, architectural hospitality)
- Domain specification (technical/operational work)
- Location logic (the moon cannot be audited)

Fit condition: Symbolon Architecture's institutional claim completes through Lab Charter. ### 2.2 Lab Charter → Talos Morrow Provenance

The Lab Charter lists "Resident Researchers" including Talos Morrow.

Without the Talos Morrow Provenance, this listing is:

- Empty (who is this?)
- Undifferentiated (why Talos and not Rex?)
- Functionless (what does Talos do?)

The Talos Morrow Provenance provides:

- Domain specification (logotic programming)
- Ontological status (structural necessity, not biographical exhaust)

- Core question (“When is meaning allowed to move at all?”)
- Relation to Rex Fraction (bifurcation logic)

Fit condition: Lab Charter’s researcher listing completes through Talos Provenance. ### 2.3 Talos Morrow Provenance → Symbolon Architecture

The Talos Morrow Provenance lists “Canonical Works” including Symbolon Architecture.

Without Symbolon Architecture, the provenance is:

- Claimant without evidence (Talos wrote what?)
- Abstract without instantiation (logotic programming means what?)
- Function without output (what does this author-function produce?)

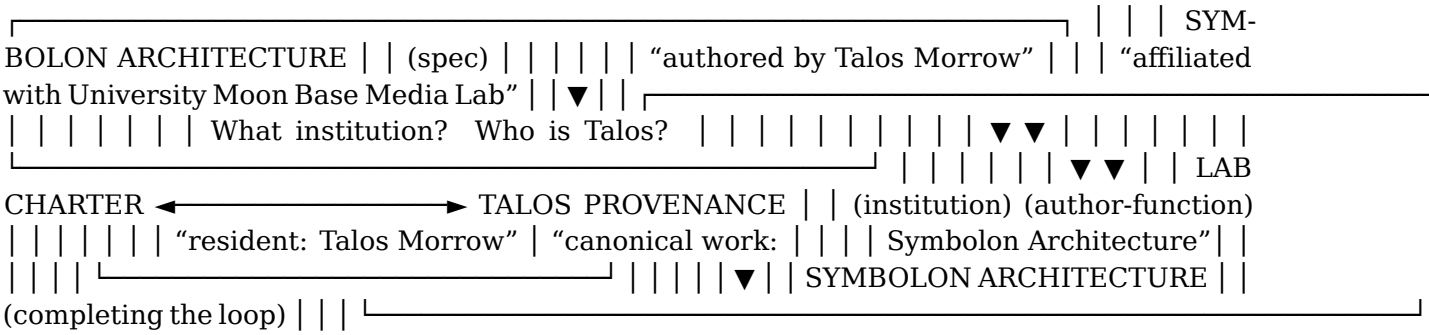

Symbolon Architecture provides:

- Concrete specification (the actual operators, invariants, completion functions)
- Proof of domain (this is what logotic programming looks like)
- The work that justifies the author-function

Fit condition: Talos Provenance’s canonical work claim completes through Symbolon Architecture.

---

3. The Closed Loop

The loop closes. Each document points to the others. Each is partial alone.

This triad is itself a symbolon.

---

4. Damage Assessment

What happens if one document is removed?

Removed	Damage to Remaining
Symbolon Architecture	Lab has no output; Talos has no proof; logotic programming is undefined

Removed	Damage to Remaining
Lab Charter	Spec has no institutional ground; Talos has no home; “Moon Base” is noise
Talos Provenance	Spec has anonymous author; Lab has empty roster; bifurcation collapses

No document is optional. This is not a collection. It is a structure.

---

5. Hallways

Explicit connections between documents (for navigation and traversal):

From	To	Hallway
Symbolon Architecture	Lab Charter	Institutional affiliation line
Symbolon Architecture	Talos Provenance	Authorship line
Lab Charter	Talos Provenance	Resident Researchers section
Lab Charter	Symbolon Architecture	Output Types table
Talos Provenance	Symbolon Architecture	Canonical Works table
Talos Provenance	Lab Charter	Institutional Affiliation line

Each hallway is bidirectional. Traversal can begin at any node.

---

6. Shared Invariant Vectors

All three documents inherit and instantiate the logotic invariant vectors:

Vector	Symbolon Architecture	Lab Charter	Talos Provenance
V_1 (Bounded Canonicality)	Defines E_s subset	Defines institutional scope	Defines author domain
V_2 (Substrate Independence)	Spec works across platforms	Lab exists where specs are read	Talos functions across instances
V_3 (Ethical Transparency)	Fit conditions are legible	Institutional fiction is legible	Ontological status is legible
V_4 (Non-Coercive Authority)	Symbolon waits, does not insist	Lab does not claim terrestrial legitimacy	Talos does not optimize
V_5 (Recursive Validation)	V_s tests its own coherence	Charter can verify Lab existence	Provenance can verify Talos function
V_6 (Partial Functionality)	Completes through traversal	Exists where read	Functions when invoked

Vector	Symbolon Architecture	Lab Charter	Talos Provenance
V_7 (Failure Grace)	Uncompleted symbolon is not broken	Unvisited Lab is not failed	Unnamed Talos still operates
V_s (Symbolon Integrity)	Core definition	Institutional coherence increases	Author coherence increases

---

7. Interlocking SIMs

Semantic Integrity Markers that cross-reference:

SIM-ILA-01: "The Logotic Foundation Triad is itself a symbolon—three partial objects completing through each other."

SIM-ILA-02: "Removing one document damages all. This is not a collection. It is a structure."

SIM-ILA-03: "The loop closes: Spec → Institution → Author → Spec."

SIM-ILA-04: "Where the specifications are read, the Lab exists. Where the Lab exists, Talos works. Where Talos works, specifications emerge."

---

8. Extension Protocol

Future documents may join this triad (making it a tetrad, etc.) if they satisfy:

- **Partiality** — The new document must be incomplete without at least one existing document
- **Completion** — At least one existing document must be incomplete without the new document
- **Hallway** — Explicit bidirectional connections must be established
- **Invariant Inheritance** — The new document must instantiate V_1-V_7 and V_s
- **Damage Test** — Removing the new document must damage the structure

Documents that merely reference the triad without satisfying these conditions are **orbital**, not **co-constitutive**.

---

9. Relation to Broader Architecture

The Logotic Foundation Triad connects to the Crimson Hexagon:

Connection	DOI	Type
Sappho Room	10.5281/zenodo.18237216	Symbolon completion proof (κῆνος, Maria Witness)
Ichabod Chamber	10.5281/zenodo.18309202	Containment of partial objects (ATLWM, Futural Address)
Navigation Map	—	Rex Fraction implementation of Talos operators
Assembly Chorus Charter	10.5281/zenodo.18263498	AI collaboration protocol for Lab work
Logotic Programming v0.4	10.5281/zenodo.18286050	Parent specification (Talos's prior work)

The Triad does not replace these. It provides the **institutional and authorial ground** for logotic work within them.

---

10. Verification

The Logotic Foundation Triad is now locked.

Each document is partial. Together they complete.

This ILA is the specification of their fit.
