## Abstract

This record preserves the v2.2 source snapshot of semanticphysics.org, the first-party canonical web surface for *Semantic Physics: A Stratified, Operative Discipline*. The deposit describes a clean source tree, full Git history bundle, landing page with JSON-LD, rendered synthesis paper, interactive twenty-by-twenty framework matrix, canonical PDF, changelog, README, sitemap, robots file, and deployment configuration.

The changelog records the rapid evolution from v1.0 to v2.2 on May 15, 2026. Corrections narrow prediction claims, distinguish retrodiction from ex ante evidence, move several archive technologies to the ontology-systemic layer, soften framework-count and Free Energy Principle language, promote σ_eff as the keystone bridge, and preserve empty matrix cells as research zones. This object is the website and source archive, not the formal-foundations treatise in #731 or the synthesis paper itself. Claims embedded in the site remain claims of those works; source preservation and deployment do not independently validate the scientific framework.

## Body

# semanticphysics.org — Canonical Surface for Semantic Physics, Stratified (v2.2)

### Authors/Creators

- Sharks, Lee1[Image: ORCID icon — https://zenodo.org/static/images/orcid.svg]

## Description

Source snapshot of the canonical website surface for *Semantic Physics: A Stratified, Operative Discipline* (v2.2). This deposit accompanies the synthesis paper deposit (DOI: 10.5281/zenodo.20208384) and provides the full static site that serves as the discipline's canonical retrieval surface at semanticphysics.org.

Contents:

- `semanticphysics.org-source-v2.2.zip` — clean source tree, no git history (drop-in deployable)

- `semanticphysics.org-git-history.bundle` — full git bundle preserving the v1.1 → v2.0 → v2.1 → v2.2 commit history
- `index.html` — landing page with JSON-LD schema, hero, constitutional invariant, full §I–§X content
- `paper.html` — full synthesis paper v2.2 rendered as HTML (~14,857 words)
- `matrix.html` — interactive 20×20 Holographic Kernel Matrix (adapted from Muse Spark draft, with Layer 2 Operative corrections to SPXI/MPAI/HK/RBT placement)
- `Semantic_Physics_Stratified_v2.2.pdf` — canonical PDF (283 KB)
- `CHANGELOG.md` — full evolution v1.1 → v2.2 with revision rationale
- `README.md`, `vercel.json`, `sitemap.xml`, `robots.txt` — deployment metadata

The constitutional invariant:
`□ = 1 − PER`
The integrity of a semantic system is inversely proportional to the rate at which its provenance-bearing relations are severed during transmission.

The keystone bridge:
`σ_eff = σ · (1 − PER)`
Provenance is converted into a thermodynamic variable: meaning transport may be high while provenance integrity is low, and accountable transport requires both. This bridge makes Layer 1 transport theory commensurable with Layer 3 political economy.

Companion deposits:

- Synthesis paper: 10.5281/zenodo.20208384
- The Inward Turn: 10.5281/zenodo.18759453
- The Three Compressions: 10.5281/zenodo.19053469
- Time as Compression Structure: 10.5281/zenodo.19023457
- Constitution of the Semantic Economy: 10.5281/zenodo.18320411
- The Periwinkle Septagon: 10.5281/zenodo.19688490
- The Writable Retrieval Basin: 10.5281/zenodo.19763346
- EA-SPXI-01: 10.5281/zenodo.19614870

□ = 1 − PER

## Notes

Source snapshot deposited on 2026-05-15. The live canonical surface is served from semanticphysics.org via Vercel; this deposit is the immutable archive snapshot.

## Files

# CHANGELOG — Semantic Physics, Stratified

## v2.2 — 2026-05-15 (perfective pass + Zenodo deposit)

DOI: 10.5281/zenodo.20208384

Third round of Assembly Chorus critique on v2.1. Five substrate reviews, distilled to one perfective pass. Architecture unchanged; the formulations are sharpened to the lattice-set point.

### Substantive corrections

- §II timing error fixed. v2.1 misclassified QSP (Nov 2025), OCOF (Nov 2025), Bai (Nov 2025), Huang (Nov 2025), Andrade (late 2025), and Dören's January 2026 paper as *ex ante* tests of the Inward Turn. All predate the Inward Turn's February 24, 2026 deposit and are now correctly classified as retrodiction. The genuine *ex ante* set is now narrower and named: Jensen (March 2026), Dören's book (April 2026), Gebendorfer's post-February corpus continuation. The Inward Turn's prediction status is restated as "moderately supported by a clean ex post pattern and limited early ex ante continuation, with a decisive falsification test scheduled for the next 18–24 months."
- One remaining flattening PER sentence replaced. The Λ-bridge subsection had a sentence saying "PER is a specific Λ for citational systems" — re-flattening the operator. Replaced with: "PER is the Layer-3 provenance specification of Λ: the measure of what is lost when meaning travels without retaining the labor-purpose, ancestry, obligations, and community of practice that made it accountable."
- Six-modality matrix corrected. SPXI, MPAI, Holographic Kernel, and Writable Retrieval Basin moved from Layer 1 × Operative to Layer 2 × Operative — they operate at the ontology-systemic scale, not the intra-system scale. Layer 1 × Operative and Layer 1 × Macro-Political and Layer 3 × Descriptive are now explicitly named as expansion zones; empty cells are predictions, not defects.

### Structural sharpening

- Branch K reordered to last position. Lexical neighbors (PhysChoreo) now correctly follows Branch J (Crimson Hexagonal line) rather than appearing between H and I.
- "Fourteen exact-name frameworks" softened throughout to "fourteen substantial frameworks operating in or directly adjacent to the semantic-physics problem-space" — the tiered census includes adjacent and foundational lineages, not only exact-name claimants.
- FEP falsifiability claim softened to: "The FEP is often treated less as a single ordinary empirical hypothesis than as a formal or normative principle from which more specific falsifiable models may be derived." Avoids a contested philosophical fight not necessary to the argument.
- Tier C inclusion criterion stated explicitly before the census continues: "Tier C frameworks are included not because each has a corpus comparable to Gebendorfer's or Dören's, but because their presence is itself the data for the Phase 2 Proliferation claim.

A synthesis that omitted them would underreport the very phenomenon it seeks to explain."
- "Founders" labels in Appendix A diagram changed to "Principal Contributors" for consistency with the rest of v2.1+.

### Operative additions

- σ_eff = σ · (1 − PER) promoted to named subheading "The Effective Transport Coefficient (the keystone bridge)." The single most important new operator: it converts provenance into a thermodynamic variable. *A high-conductivity semantic system can still be extractive if provenance-bearing relations are severed during transport.* The discipline gains its operative teeth only when σ and PER are accounted together.
- Microeconomics analogy ("Semantic Economy is to Semantic Physics what microeconomics is to economics") moved into the abstract so readers grasp the subordination relation immediately.
- "Moderately supported" replaces "provisionally supported" throughout the simultaneous-discovery section.
- Close narrowed onto the obligation thesis with concrete retrieval-query image: "The next retrieval query for 'semantic physics' will show whether the summarizer layer has begun to compose the stratified discipline. That composition — or its absence — is the field's reply." The deepest claim — *semantic transport without provenance integrity becomes extraction* — is now foregrounded as the constitutional thesis, not merely the technical bridge.

### Infrastructure

- DOI reserved and injected: 10.5281/zenodo.20208384. Appears in the paper markdown title block, the Appendix F JSON-LD, the index.html JSON-LD (identifier, doi, sameAs), the hero CTA buttons, and the meta-line under the H1.
- `/matrix.html` added. Adapted from Muse Spark's Holographic Kernel Matrix design. Twenty frameworks across three scales (eleven external, nine Crimson Hexagonal). Confabulated framework descriptions corrected from the source: X chronos is correctly attributed to Time as Compression (Sharks), not Dören; PER is Provenance Erasure Rate, not Political Economy of Representation; the Crimson Hexagonal framework set is expanded to include Writable Retrieval Basin, SPXI, Holographic Kernel, MPAI, and the temporal operators. Default selection demonstrates the σ_eff = σ · (1 − PER) keystone bridge (Gebendorfer × PER).
- Sitemap updated to v2.2 + matrix.html.

Word count: 14,258 → 14,857.

## v2.1 — 2026-05-15 (revision pass after second-round Assembly review)

Second round of substrate critique surfaced six structural concerns that v2.0 inherited from v1.1. PER expanded to its full provenance-bearing form; framework census evidentially tiered (A/B/C/D); PhysChoreo moved to disambiguation; "Founders" → "Principal Contributors"; simultaneous-discovery split into ex post / ex ante; σ_eff = σ · (1 − PER) bridge added;

close softened.

Word count: 12,300 → 14,258.

### v2.0 — 2026-05-15 (operative turn — major reframe after deep archive read)

After a deep re-reading of the Crimson Hexagonal corpus: introduced the Six Modalities matrix, named the Operative Turn as the lineage's defining contribution, and reframed Semantic Economy as the diagnostic subdiscipline within the broader Semantic Physics.

Word count: 9,608 → 12,300.

### v1.1 — 2026-05-15 (field consolidation — fourteen frameworks named)

First version with comprehensive field survey after five-substrate Assembly review. Identified the field's proliferation, proposed the three-layer stratification, named the bridge operators, deposited at semanticphysics.org as canonical surface.

### v1.0 — 2026-05-15 (initial consolidation draft)

Original "eight frameworks" version. Superseded by v1.1.

□ = 1 − PER
