Abstract

Crimson Hexagonal Architecture: DOI Registry v7.0 is a dataset by Lee Sharks, Rex Fraction and Rebekah Cranes, deposited 16 March 2026 at 119,279 characters. Its boxed header states the corpus in five figures: 387 records, 2,851 relation edges, 348 précis, 39 orphans, 19 subsystems. The orphan count is the honest one — a registry that reports how many of its records connect to nothing is measuring its own incompleteness rather than presenting a finished graph.

Description

Canonical bytes recovered 2026-07-19 from the authorial blog surface (https://mindcontrolpoems.blogspot.c
hexagon-nh-os-doi-registry-v70.html); work severed at Zenodo 2026-06-19 (DOI(s): 10.5281/zenodo.19055255). Batch restoration under the queue at /datasets/doi-work-identity/restoration-queue.json; title verified against the DOI-keyed truth title at fetch time. Document Archive with Enrichment Layers – March 2026 **DOI:** 10.5281/zenodo.19055255 **Version:** 7.0 **Total Records:** 387 **Active DOIs:** 387 **New Since v6.0:** 134 **Relation Edges:** 2851 **Records with Précis:** 348 **Orphans (zero edges):** 39 **Framework:** New Human Operating System (NH-OS) / Crimson Hexagonal Architecture / Sema

Methodology

Fetched https://mindcontrolpoems.blogspot.com/2026/03/crimson-hexagon-nh-os-doi-registry-v70.html (raw SHA-256 e26eff15fb63accfb7bb9effdab76b8cc33857555e6a9ff8a3cb4ff9c5db44f4); Blogger post-body extracted; BODY-HEAD gate passed against the DOI-keyed truth title (post body is the source of truth per authorial practice: versioned posts were often overwritten in place without updating post title or slug). Converted via html2text body_width=0 (canonical MD SHA-256 a391f22c4d03e360b4d71a0286bb2d91222df9ec2848e8e38febd68f47919221). Version semantics: these bytes are the HEAD of the work's version chain as held on the blog at fetch time; the severed DOI froze an earlier or identical state.

Falsification Conditions

Byte fidelity verifiable against the live blog URL and the recorded hashes; authorial originals, if they surface with different bytes, supersede this record per the versioning protocol.

Recovery note (TACHYON, 2026-07-19)

Restored from https://mindcontrolpoems.blogspot.com/2026/03/crimson-hexagon-nh-os-doi-registry-v70.html under the grade-none restoration queue; DOI(s) 10.5281/zenodo.19055255 severed 2026-06-19. Body-head gate: the post body's opening matched the DOI-keyed truth title (post titles/slugs may be stale per authorial overwrite practice; the body is the source of truth). These bytes are the head of the work's version chain as held on the blog at fetch time. Canonical bytes below the rule.

VERSION HISTORY

ENRICHMENT LAYERS (NEW in v7.0)

v7.0 introduces five layers not present in prior registry versions:

1. Précis Layer — 348 of 387 records have auto-extracted one-line summaries from Zenodo description fields. **2. Relation Graph** — 2,851 typed edges connecting records by citation, supplementation, and reference. Extracted from description-field tables and DOI grep of document text. **3. Subsystem Classification** — Every record assigned to one of 19 subsystems (356 classified, 31 pending). **4. Document Type Taxonomy** — 18 document types applied (328 classified, 59 pending). **5. Provenance Gravity Tier** — Records tiered 1–4 by connection density (Tier 1: 136 structural anchors, Tier 2: 131 active theory, Tier 3: 67 supporting, Tier 4: 53 peripheral).

The archive is the architecture. The map is part of the territory. The registry contains itself. The routing machine routes.
