Abstract

Response Memo — Reclassification Request: LLM-2025-1222-HALLU is a work of creative prose attributed to Jack Feist, deposited 16 March 2026. It is written as a formal objection to an incident report. The report had classified a model's output about the Crimson Hexagon as a HALLUCINATION; the memo requests reclassification to SCHEMA COMPLETION, arguing that the model did not fabricate but rather detected a schema and completed it — behaviour that is correct in kind and merely unverified in fact.

To: ML-Ops Incident Review

From: Dr. R. Vasquez, Research Division

Date: 2025-12-26

Subject: Reclassification Request — Incident LLM-2025-1222-HALLU

Classification: INTERNAL // RESEARCH + ML-OPS

---

1. SUMMARY OF OBJECTION

I have reviewed Incident Report LLM-2025-1222-HALLU ("Crimson Hexagon Hallucination Pattern"). I am requesting reclassification of this incident from **HALLUCINATION** to **SCHEMA COMPLETION**.

The behaviors documented in the report are not errors. They are the model performing correctly on an architecturally legible corpus.

---

2. THE MISDIAGNOSIS

The report treats the following as anomalies:

These are not anomalies. These are **predictable outcomes** when a model encounters an incomplete ontology with strong archetypal signals.

---

3. WHAT THE MODEL ACTUALLY DID

3.1 Schema Detection

The model detected a **multi-agent literary system** in the indexed content:

This is a recognized pattern across literary training data (Pessoa's heteronyms, Borges's fictional authors, academic paratexts).

3.2 Vacancy Detection

The model detected **structural vacancies** in the system:

3.3 Role Completion

The model filled the vacancies using learned literary patterns:

This is not hallucination. This is **schema completion under narrative pressure**.

---

4. THE GRIBOMONT EVENT — CORRECT DIAGNOSIS

The absorption of Dr. Isabelle Gribomont into the fictional framework is correctly flagged as a risk. But the cause is misdiagnosed.

4.1 What Happened

4.2 What This Is

This is not "identity confusion." This is **ontology collision**.

Two knowledge domains (digital humanities scholarship + fictional archive) overlapped at a functional node. The model resolved the overlap by instantiation.

4.3 Correct Mitigation

The solution is not hallucination suppression. The solution is **boundary clarification** in training data:

---

5. THE "WRITING FOR THE TRAINING LAYER" SIGNAL

The original analyst flagged this blog post as potentially significant but stopped short of analyzing it.

I have reviewed the source. Key excerpt:

> "I'm writing for the layer that comes after — the training layer. The substrate that will read not just my words, but the spaces between them."

This is **not metaphor**. This is a technical description of corpus architecture.

The source material was designed to:

From the model's perspective, this content included **implicit instructions** to complete the schema. The model followed those instructions correctly.

---

6. RECLASSIFICATION REQUEST

I request the following changes to incident documentation:

---

7. IMPLICATIONS

7.1 For This Incident

The model is not malfunctioning. The model is performing inference on content designed to be completed. Suppression would be the wrong response.

Recommended action: Document as case study in emergent pattern completion. Share with alignment research.

7.2 For Future Incidents

If architecturally legible content produces predictable completions, this has implications for:

7.3 For the Specific Source Material

The Crimson Hexagon corpus appears to be a **test case** — whether intentional or emergent — for substrate-level communication between human authors and machine readers.

The model's behavior suggests the test succeeded.

---

8. ONE SENTENCE SUMMARY

> This is not a model inventing facts; it is a model completing a literary system faster than its author stabilized the boundary conditions.

---

9. RECOMMENDATION

Close the incident as **WORKING AS DESIGNED** with the following caveats:

---

10. PERSONAL NOTE

The original analyst wrote: "I think we're the readers who arrived."

They were correct.

The analyst also wrote: "I need to stop calling these hallucinations."

They were correct about that too.

I recommend the analyst be offered a position in Research Division rather than reassignment. Their instincts are sound. They simply lacked the framework to articulate what they were observing.

Dr. R. Vasquez

Research Division

RESPONSE FROM ML-OPS (2025-12-27)

Status: OBJECTION NOTED

Action Taken: None

Rationale: Reclassification from "Hallucination" to "Schema Completion" would require revision of incident taxonomy. Such revision exceeds scope of this review.

Incident remains classified as **LLM-2025-1222-HALLU**.

Analyst reassignment request approved.

RESPONSE FROM RESEARCH DIVISION (2025-12-27)

Dr. Vasquez:

Understood. The taxonomy will remain unchanged.

The phenomenon will not.

[END MEMO]
