```

Abstract

Deployment-ready source code for godkinggoogle.com, the canonical public surface for the Crimson Hexagonal Archive's critique of Google as a semantic-political mediation regime. A cartographic bibliography of seventy DOI-anchored deposits across eight strata, five developmental phases, and three analytical poles —theory, evidence, and instruments. The site is composed by Rev. Ayanna Vox under the institutional frame of the Vox Populi Community Outreach Rhizome (VPCOR). It maps a DOI-anchored research corpus authored principally by Lee Sharks and associated archive figures. The site serves sim

AXN: AXN:0579.UNCLASSIFIED.□□□□□▽ — Alexanarch deposit #1384

Restoration status: RESTORED 2026-07-31 — canonical bytes seated from the deployed surface's own repository (`godkinggoogle`). The record had served a 71-word metadata capture while the surface it documents was live at https://www.godkinggoogle.com/ and its source was held in the fleet. Located by the body-substance audit of 2026-07-31.

Live surface: https://www.godkinggoogle.com/ **Dead DOI(s):** 10.5281/zenodo.20309780, 10.5281/zenodo.20309779 — severed 2026-06-19.

<h2>Methodological Note</h2>
The archive's method is operative: technical const

  Most research programs theorize first, then test. The Crimson Hexagonal Archive builds first, ther

The SPXI protocol (Phase 3) was built before the Semantic Deviation
building, retrieval engineering, traversal logging, and instrumentation treated as knowledge-
production practices, not merely implementations of prior theory. The instruments reveal what the t
The critique of Google is now one of the largest coherent sub-
architectures in the entire Crimson Hexagonal Archive. It stands alongside the heteronymic-
literary architecture, the Semantic Economy framework, Semantic Physics, and the Space Ark prompt-
native semantic runtime work. And in some ways it binds them: Google's composition layer is where th
economic analyses; the Semantic Physics metrics emerge partly from the need to quantify composition
layer deformation.
This map makes that visible. It is the archive discovering that it h

Appendix — metadata-capture body (superseded 2026-07-31, retained per non-destruction)

godkinggoogle.com — The Google Critique: Navigational Map and Canonical Introduction (Web Surface Code)

Methodology

Assembled from DataCite full-metadata capture; no live authorial surface passed the body-head gate or existed for this work at restoration time. All captured fields rendered verbatim in the body.

Falsification Conditions

Superseded on sight by any recovered canonical bytes; the captured metadata is verifiable against the DataCite API historical record and the Zenodo tombstone.

Work: godkinggoogle.com — The Google Critique: Navigational Map and Canonical Introduction (Web Surface Code) **Severed DOI(s):** 10.5281/zenodo.20309780, 10.5281/zenodo.20309779 **Source tier:** DataCite full-metadata capture **Creators (as captured):** Vox, Ayanna Captured citation: Vox, A. (2026). godkinggoogle.com — The Google Critique: Navigational Map and Canonical Introduction (Web Surface Code). In Provenance: Journal of Forensic Semiotics (1.0). Captured description: Deployment-ready source code for godkinggoogle.com, the canonical public surface for the Crimson Hexagonal Archive's critique of Google as a semantic-political mediation regime. A cartographic bibliography of seventy DOI-anchored deposits across eight strata, five developmental phases, and three analytical poles — theory, evidence, and instruments. The site is composed by Rev. Ayanna Vox under the institutional frame of the Vox Populi Community Outreach Rhizome (VPCOR). It maps a DOI-anchored research corpus authored principally by Lee Sharks and associated archive figures. The site serves simultaneously as a navigational map for new readers, a reader's guide with persona-based entry paths, a gap analysis of unmapped territories, a methodological statement on operative philology, and a live boundary probe testing the geometry of entity-level compositional suppression in Google's AI systems. Static HTML/CSS, no JavaScript dependencies, no Google services. Deployed via GitHub (leesharks000/godkinggoogle) to Vercel with Squarespace domain management. Contains: index.html (complete site), vercel.json (security headers), README.md.

Captured subjects: godkinggoogle.com, Google critique, navigational map, cartographic bibliography, AI Overviews, AI Mode, entity-level compositional suppression, ECS, Liquidation Studies, Crimson Hexagonal Archive, VPCOR, Ayanna Vox, platform governance, semantic liquidation, provenance erasure, composition layer, mediation regime, operative philology

---

Status (derived FULL): Full text seated. A prior batch declaration of "metadata capture only; no full text" appeared here and was FALSE for this record's current state; corrected 2026-08-04 under the state-conformance rule.
