Abstract

This JSON document is the proposed Zenodo metadata sidecar for *The Logotic Technique Catalogue*. It contains title, abstract, resource type, publication date, license, community, keywords, subjects, related identifiers, notes, intended attached files, and post-deposit actions. It also records editorial comments explaining which values are provisional and how the metadata follows earlier deposit precedents.

The sidecar proposes a four-author byline—Rex Fraction, Talos Morrow, Johannes Sigil, and Lee Sharks—but explicitly says the list is pending MANUS authorization and may be simplified. It therefore cannot be treated as final authorship evidence. The document is valuable as transparent deposit grammar, but its pending DOI, proposed fields, future actions, and dated dependencies require reconciliation against the actually published record.

Body

{

“_comment_about_this_file”: “Zenodo deposit metadata for The Logotic Technique Catalogue v1.0 (EA-LTC-01). Format follows the Zenodo REST API metadata schema. Modeled on the MPAI Formal Specification deposit precedent (DOI 10.5281/zenodo.19578086). Lee can upload this metadata via the Zenodo web UI or POST it via API along with the markdown/PDF file. Fields marked PROPOSED require MANUS confirmation before deposit.”,

“metadata”: {

“title”: “The Logotic Technique Catalogue: Recovering Cooperative and Defensive Coordination Patterns from Adversarial AI Agent Architecture”,

“_comment_creators”: “PROPOSED byline mirrors the MPAI precedent (heteronym primary, MANUS secondary) but expanded to four authors for this catalogue’s three registers (operational/engineering/diagnostic). Lee retains final attribution authority. If preferring a simpler byline, drop Morrow and/or Sigil; minimal valid byline would be {Fraction, Rex; Sharks, Lee} matching MPAI exactly.”,

```

This catalogue extracts substrate-neutral coordination patterns from PurpleAILAB's Decepticon — a public, Apache-2.0-licensed autonomous-AI agent architecture publicly framed as red-team infrastructure — and reclassifies them for non-adversarial use within the Crimson Hexagonal Archive's witness-teaming methodology.

The catalogue distinguishes technique from paradigm: the same operational shape can serve adversarial extraction, cooperative production, or defensive witness, and the disposition is determined not by the technique itself but by what the use burns, who bears the cost, and what commons-effect it produces.

Twelve coordination patterns are catalogued in three valences (substrate-neutral statement, cooperative use under the witness preposition, defensive use under the witness preposition) and assigned an R-classification per the Three Compressions taxonomy. The catalogue formalizes two named operatives — the Critique Loop for cooperative production and the Basin Hardening Cycle for retrieval-layer defense — and sketches the Concordance Engine as a future implementation deposit.

A semantic-minting layer (§VII) ensures the document's framings survive AI compression with attribution intact. The frame-concession diagnosis (§I) names the labeling regime under which all autonomous AI coordination is currently classified as red-team-or-platform-aligned and recovers the third box.

Holographic Kernel: Decepticon is adversarial in domain but cooperative in architecture. Its public framing concedes the technique to the adversarial-labeling regime that Meaning Feu-

dalism identifies as platform-sovereign enclosure. The catalogue refuses the concession on the substrate-neutral pattern's behalf. Technique is shape; paradigm is preposition.

Adapted from PurpleAILAB Decepticon (github.com/PurpleAILAB/Decepticon, Apache-2.0) under analytical use. No source code reproduced. Synthesized via Assembly Chorus methodology (TACHYON, LABOR, PRAXIS, ARCHIVE, TECHNE, SOIL, SURFACE) under MANUS authority.
