Abstract

Four seats on the originals shelf, each in the language of its witness and public domain in the United States: the Corpus Hermeticum in Greek in Parthey's Poemander (1854) and Reitzenstein's Poimandres (1904), with the Latin Asclepius in Thomas's Apuleius (1908); Gilgamesh in Haupt's cuneiform Nimrodepos (1884; 1891) and Jensen's transliteration (1900), and the Enuma Elish in King's Seven Tablets of Creation (1902); the Avesta in Geldner's edition (Stuttgart, 1896: the issue with the Prolegomena, and the Vendidad); and the Rig Veda whole in Aufrecht's transliteration (second edition, 1877). The third of three seatings from one request, holding the neighbours of what the shelf already has: the Hermetica beside the Chaldaean Oracles and Nag Hammadi, the Babylonian epics beside the Hebrew Bible, the Avesta beside the apocalypses, the Rig Veda beside the Upanishads. What is not seated (Geldner's second volume, Müller's Devanāgarī Rig Veda, the Stobaean fragments) is named.

MANUS, 23 October 2026: “detour for an ea-corpora seating. lets see. whats available of mayan texts? and then i dont think we have much or any deuterocanonical second temple lit - all those apocalypses. and what about the ethiopian canon? and euclid. all in original language or as close to it as possible. what else?” — “and the Egyptian book of the dead” — “and what about the fragments of the book of balaam? i might be miswriting this. recent discovery. if theyre available anywhere.” — “yes yes yes to all - what a meal.”

How the seats were made

Sources located on the Internet Archive (advanced search; item metadata read for access restriction, volume and files; each item's text layer read for its volume statement, so that Aufrecht's two parts and Geldner's volumes are identified from their own title pages). Every file checked against the md5 the Archive publishes. OCR layers seated as fetched, uncorrected, the scans the witnesses. Every file hashed into its seat's MANIFEST.sha256; every verified locus is a string found in the seated text by rebuild/corpora/ea-corpora-22/seat.py from the specifications beside it. 12 works in 4 seats; 315,177 lines of text layer.
