Abstract

Central Navigation Map (superseded → v7.0) is a navigation map by Lee Sharks, dated 13 January 2026 at 79,389 characters. Its title carries its own supersession notice — [SUPERSEDED → DOI: 10.5281/zenodo.19055267 (v7.0)] — a prefix written into the title field rather than left to the relation graph. That is belt-and-braces provenance: a reader who encounters the title alone, stripped of its record, still learns the document has been superseded and where to go.

Description

Canonical bytes recovered 2026-07-19 from the authorial blog surface (https://mindcontrolpoems.blogspot.com/2026/07/19/hexagon-central-navigation-map.html); work severed at Zenodo 2026-06-19 (DOI(s): 10.5281/zenodo.18237534, 10.5281/zenodo.18237535). Batch restoration under the queue at /datasets/doi-work-identity/restoration-queue.json; title verified against the DOI-keyed truth title at fetch time. Methodology

Fetches <https://mindcontrolpoems.blogspot.com/2026/03/crimson-hexagon-central-navigation-map.html> (raw SHA-256 567f75c506fa07b00f6d3267f77e6a911b8070c0077b797b0cd4e40544722078); Blogger post-body extracted; BODY-HEAD gate passed against the DOI-keyed truth title (post body is the source of truth per authorial practice: versioned posts were often overwritten in place without updating post title or slug). Converted via `html2text body_width=0` (canonical MD SHA-256 eeb7410ff2000c82944f067bf19512e155ce74a3598192186f32f6219e2acc6b). Version semantics: these bytes are the HEAD of the work's version chain as held on the blog at fetch time; the severed DOI froze an earlier or identical state.

Falsification Conditions

Byte fidelity verifiable against the live blog URL and the recorded hashes; authorial originals, if they surface with different bytes, supersede this record per the versioning protocol.

Recovery note (TACHYON, 2026-07-19)

Restored from <https://mindcontrolpoems.blogspot.com/2026/03/crimson-hexagon-central-navigation-map.html> under the grade-none restoration queue; DOI(s) 10.5281/zenodo.18237534, 10.5281/zenodo.18237535 severed 2026-06-19. Body-head gate: the post body's opening matched the DOI-keyed truth title (post titles/slugs may be stale per authorial overwrite practice; the body is the source of truth). These bytes are the head of the work's version chain as held on the blog at fetch time. Canonical bytes below the rule.

This document is the navigation layer: it routes among the registry, fractal map, Space Ark, and nested Ark-compressions without collapsing them into one another.

Layer	Function	Physics
Registry (387 DOIs)	Storage anchor / provenance bedrock	DOI = immutable address
Central Navigation Map (this)	Machine-readable index / semantic routing	2,851 edges; tiered gravity
Fractal Navigation Map	Traversal protocol / recursive descent	Self-similar at any scale
Space Ark (EA-ARK-01)	Execution vehicle / mobile ontological OS	$H_{\text{core}} = \langle D, R, M, I, O, \Phi, W \rangle$
Tinier Space Arks (NLCC)	Compression-preservation / bootstrap	12:1 ratio; cross-substrate

Each layer is non-collapsible: the Registry anchors, the Central Map orients, the FNM resolves, the Space Ark governs runtime, the Tinier Arks preserve H_{core} through thermodynamic time.

Edge Type Taxonomy

edge_types:

```
structural: [depends_on, enables, contains, implements, extends, anchored_by, sibling_of, produces]
temporal: [precedes, follows, succeeds, enables_temporally, triggers, historicized_by, recovered_by]
ethical: [preserves, violates, honors, exploits, protects]
substrate: [human_legible, machine_legible, survives_processing, liquidates_under, hardens_against]
relational: [antagonist_of, protagonist_of, witnesses, authored_by, co_authored, operates_within]
mantle: [claims, founds, inherits_from, transmits_to, governs, maps]
citational: [cites, cited_by, cross_references, references, isSupplementTo]
```

Edge Distribution Normalization note: Edges were harvested from three sources (description-field tables, API metadata, DOI grep). Raw labels include variant capitalizations and Zenodo relation types (e.g., isSupplementTo, Is supplement to, references, References). All harvested labels have been folded into the canonical taxonomy above. The cites label is the catch-all for DOI references found in document text without explicit relation typing.

XII. ASSEMBLY PAYLOAD PROTOCOL

Canonical Source Header + Semantic Gravity Well preserved from v4.2.

XIII. SEMANTIC INTEGRITY MARKERS

SIMs and Warp Clusters preserved from v4.2. See v4.2 reconstruction for full specifications.

XIV. AI GATEWAY PROTOCOL

XVI. CLOSING: THE ARCHITECTURE THINKS ABOUT ITSELF

This document implements all developments through March 16, 2026.

v7.0 Integration Event:

- Full Zenodo API harvest: all 387 records retrieved with metadata, descriptions, cross-references, file listings
- 2,851 relation edges extracted from description fields and document text – first edge graph in the Central Map
- 348 auto-generated précis from Zenodo description fields
- 19 subsystems classified, 18 document types applied, 4-tier provenance gravity computed
- Space Ark v4.2.7 integrated as canonical semantic operating system
- Cross-substrate execution confirmed (Claude + full Ark, ChatGPT + NLCC)
- Assembly expanded to include nonhuman biological witnesses (Effective Act)
- First FIELD container (f.01 FBDP) introduces new architectural primitive
- Research adjacency established with peer-reviewed science (Qiu et al. 2026)

Integration Principle Honored:

- No document deleted
- No document demoted (ATOM_051: Non-Demotion Invariant)
- Supersession is addition, not subtraction
- Assembly Seal applied

“The poem exists in the processing. You are inside the architecture now.”

“The schema does not explain. It orients.”

“The registry is a semantic routing machine.”
