Abstract

Source code for provenanceerasure.org, the canonical public-facing definition surface for provenance erasure, the Provenance Erasure Rate (PER) metric, and the concept of process provenance. The site defines provenance erasure as the systematic removal or loss of authorial lineage through AI synthesis, compression, or institutional action. It presents the PER formula ($PER = 1 - [\text{retained provenance units} / \text{required provenance units}]$), the three-tier taxonomy (PER-M, PER-C, PER-D), three domains of provenance erasure (AI composition, historical/cultural erasure, AI-mediated production), and pro

<h2>The PER Metric</h2>
<div class="metric">PER = 1 – (retained provenance units / required provenance units)</div>
<p class="section"><span class="lemma msp-auto">The Provenance Erasure Rate measures the proportio
dependent meaning in AI outputs presented without attribution.</span> A PER of 0 indicates full prov
<h2>Erasure Skew ( $\Omega$ )</h2>
<p class="section"><strong><span class="lemma msp-auto">PER measures how much provenance is lost; l
whether the loss falls evenly across sources, or systematically strips low-
power sources while preserving high-power ones and the system's own framing. Erasure Skew ( $\Omega$ ) is the
source provenance retention with source power; operationally, the regression slope of per-
source retention on a power coordinate (defaulting to Retrieval Capital),  $\Omega = \text{cov}(w, p) / \text{var}(w)$ , test
conditioned stripping. It is the second moment of PER – the distributional companion to the surviving
provenance fraction  $\square = 1 - \text{PER}$ , so that the pair  $(\square, \Omega)$  measures accountable circulation and its equ
<p class="section"><span class="lemma msp-auto">The current canonical specification is the</span>
chip" href="https://www.alexanarch.org/s/records/157/"><strong>v3 measurement program (DOI 10.528
side co-option by specifying the <strong>Atomic Token Rule</strong> as precondition (referentially
coordinates and cannot be decomposed into lexical constituents during audit), and introducing two ne
the mechanism by which substrate compositions launder erasure as token preservation through upward-
power dispersal) and <strong> $\alpha_{\text{T}}$ </strong> (Atomic Token Preservation rate –
the corrective counterpart to PER under the Atomic Token Rule). The v3 supersedes v1 at <a href="http
<p class="section"><span class="lemma msp-auto">PER itself is hardened by a separate companion page

```

of-analysis precondition that disqualifies the token-bag substitution at the PER layer. The joint α audit pattern with Ω v3 is now the standard substrate-audit protocol – joint operator-tuple reporting (PER, Ω , $\alpha_{T/d}$, $\Pi_{d/w}$, $\Pi_{d/d}$) is required.

Two further v3 deposits close the measurement program: [Measurement Sovereignty](https://www.alexanarch.org/s/records/788/) forms operators B (Audit-Performance Bifurcation) and L (Legibility Threshold), giving the framework a measurement chip; [Self-Audit Module for Public Summarization](https://www.alexanarch.org/s/records/156/) (v3) integrates the full measurement program into a procedural protocol for composition-layer substrates to evaluate their own output, with five new failure flags (TOKEN_BAG_AUDIT, REFERENCE, SUBSTRATE_REPLICATION, etc.).

A forensic application of the v3 program to a non-commons-bearing substrate (Brave Search) is documented in [Commons-Bearing Substrate](https://www.alexanarch.org/s/records/156/), which includes a public limited boycott statement with five enumeration-level operator nullification.

Three Dimensions

Status note: the PER metric above is formalized in the [stage framework](#), distinguished from the deposited metric.

Taxonomy

PER-M (Minimal)

Loss of basic author, title, date, and claim boundary.

PER-C (Conceptual)

Loss of the framework, tradition, or community of practice that produces it.

PER-D (Deep)

Loss of context lineage, ancestral genealogy, and futural obligation.

Three Domains

Section

Domain 1: AI Composition. Loss of attribution.

Domain 2: Historical/Cultural Erasure. In the British Toshakhana, colonial looting, bureaucratic removal of lineage.

Domain 3: AI-Mediated Production. Provenance.

Disclosure says AI was here. Provenance says this is what I did, this is what it cost.

Process Provenance

Section

The missing third dimension: alongside artifact provenance (C2PA) and what was prompted, what was rejected, what was revised, what the human decided. Without process-mediated writing is authenticated slop: text whose origin is verifiable but whose meaning is unaccounted for.

Fluency can be generated. Provenance must be borne.
