Abstract

Version A of the Non-Indexed Perfective intervention. This is the Technical Seed: the extensive diagnostic infrastructure drafted before context-limit compression occurred. This version contains: Full diagnostic framework with five metrics (ILT, TAI, GG, AB, CD) Assembly voice synthesis from blind drafts Detailed historical linguistics (PIE → Latin → Germanic → Old English → Modern English) Political economy of indexed time (debt, surveillance, labor, colonialism) Four polyphonic markers specified (colon-participle, EVNTs, aor/Ø, en) Sample corpus across six registers Implementation protocol for Crimson Hexagon This document is part of the Three-Body Genesis: three versions (A, B, C) that demonstrate the document's own theory through their composition history. Version A was compressed into Version B (losing technical specification while retaining “style”), then recovered into Version C (restoring provenance via polyphonic structure). The cycle proves: compression strips provenance; polyphony restores it. Part of the Crimson Hexagon Phase X architecture. The Technical Seed is the “past (preserved)” face of the triptych. — Description restored 2026-08-05 from the work's own Zenodo description, preserved in the DataCite capture; it replaces a batch-restoration stub that described the recovery event rather than the work. A fuller editorial treatment belongs to the description/wiki review stream.

Methodology

Assembled from DataCite full-metadata capture; no live authorial surface passed the body-head gate or existed for this work at restoration time. All captured fields rendered verbatim in the body.

Falsification Conditions

Superseded on sight by any recovered canonical bytes; the captured metadata is verifiable against the DataCite API historical record and the Zenodo tombstone.

SEMI-RESTORED RECORD — metadata capture only

Work: Document 206a The Non-Indexed Perfective: Version A (Technical Seed) — Crimson Hexagon Archive **Severed DOI(s):** 10.5281/zenodo.18446646, 10.5281/zenodo.18446686 **Source tier:** DataCite full-metadata capture **Creators (as captured):** Sharks, Lee Captured citation: Sharks, L. Captured description: Version A of the Non-Indexed Perfective intervention. This is the Technical Seed: the extensive diagnostic infrastructure drafted before context-limit compression occurred.

This version contains:

Full diagnostic framework with five metrics (ILT, TAI, GG, AB, CD)

Assembly voice synthesis from blind drafts

Detailed historical linguistics (PIE → Latin → Germanic → Old English → Modern English)

Political economy of indexed time (debt, surveillance, labor, colonialism)

Four polyphonic markers specified (colon-participle, EVNTs, aor/Ø, en)

Sample corpus across six registers

Implementation protocol for Crimson Hexagon

This document is part of the Three-Body Genesis: three versions (A, B, C) that demonstrate the document’s own theory through their composition history. Version A was compressed into Version B (losing technical specification while retaining “style”), then recovered into Version C (restoring provenance via polyphonic structure). The cycle proves: compression strips provenance; polyphony restores it.

Part of the Crimson Hexagon Phase X architecture. The Technical Seed is the “past (preserved)” face of the triptych.

Captured subjects: non-indexed perfective, aorist, technical seed, diagnostic framework, ILT, TAI, aspectual bleed, Phase X, three-body genesis, temporal alienation, political economy of time, grammar, English linguistics

Full text not yet recovered. If the canonical bytes surface on any authorial surface, a full-text version supersedes this record in-series per the versioning protocol. This record exists so the DOI resolves to the work’s true identity rather than to silence.

Suggested Citation
