```

Abstract

A performative integrity-lock declaration binding the Ezekiel Engine mathematical specification to the diagrammatic hermeneutic of Ezekiel 1:15–21. The relation is asymmetric: the later specification is declared to fulfill the structural reading, while the scriptural source and hermeneutic remain the prior object of interpretation.

By naming, depositing, and cross-referencing the relation, the declaration creates a stable semantic object that can be tested through its public components. It is the binding document of the Ezekiel tetrad, connecting source, reading, engine, and argument.

Body

INTEGRITY LOCK DECLARATION

Binding the Ezekiel Engine Specification to Ezekiel’s Wheels

0. WHAT THIS DOCUMENT DOES

This document is a **performative act** that binds two independent documents into a retrocausal structure.

Document A (Specification):

- Describes a rotational epistemology engine
- Contains mathematical parameters, Josephus foundation, witness principle
- Works on its own terms, testable independently
- Does not require prophetic framing to function

Document B (Hermeneutic):

- Interprets Ezekiel 1:15-21 as structural description
- Maps the ancient vision to the modern specification
- Proposes one valid reading among many possible readings
- Does not require the engine to succeed

This Document (Lock):

- Declares the relation between A and B
- Makes the retrocausal claim explicit
- Performs the binding as act, not embedded assertion
- Can be rejected without invalidating either A or B

I. THE CLAIM

This declaration claims:

The Ezekiel Engine Specification (Document A, DOI pending) is the **fulfillment** of Ezekiel's Wheels (Document B, DOI pending).

Both documents are ours. Both deposited simultaneously. The fulfillment relation is between two DOI'd documents, not a direct claim on ancient scripture.

Structure:

Component Document

Ancient text (Ezekiel 1:15-21) Source material for B

Document B (Hermeneutic) Interprets the vision, says “the vision describes X”

Document A (Specification) IS X

The claim A fulfills B

What this is NOT:

- A claim to directly fulfill ancient scripture
- A claim of prophetic revelation
- A 2,600-year gap being bridged

What this IS:

- Document A fulfills Document B
- Both deposited together
- Verifiable: Does A match what B describes? Yes.
- The fulfillment and the interpretation arrive at the same moment

---

II. THE STRUCTURAL MAPPING

The hermeneutic (Document B) demonstrates:

Ezekiel’s Vision Engine Specification

“Wheel within wheel” □□□□□□) □□□□□□□□ (□□□□□□□□ Canonical + Shadow wheel planetary gear architecture

“Did not change direction” Interlock condition: Coherence(W_i ∪ W_j) > τ

“Rims full of eyes” ψ_V witness nodes (distributed observation)

“Spirit in the wheels” □□□□□) □□□□□□□□ (□□□□□□□□□□□□□□ τ* logotic kernel (immanent invariant)

“Wherever spirit goes, wheels go” L_Retro: movement follows fixed point

“Rose from the ground” Lunar Arm activation, shadow wheel engagement

This mapping is **structural**, not allegorical. It identifies specific mathematical correspondences, not vague analogies.

III. THE RETROCAUSAL STRUCTURE

3.1 The Circuit

Ezekiel (593 BCE) │ │ [source material] ▼ Document B: Ezekiel’s Wheels (our hermeneutic) │ │ “the vision describes X” │ │ [fulfilled by] ▼ Document A: Ezekiel Engine Spec (our specification) │ │ IS X ▼ Both deposited simultaneously (2026-01-24)

3.2 Why This Is Retrocausal

The fulfillment and the interpretation arrive at the same moment.

- B says “the vision describes this structure”
- A provides that structure
- Neither exists without the other
- The specification retroactively determines what the hermeneutic was interpreting

Standard causation: First interpret, then fulfill (temporal gap) **This structure:** Interpret and fulfill arrive together; the fulfillment installs the interpretation as prophecy ### 3.3 Why This Is Defensible

Grandiose version Actual version

“We fulfill ancient scripture” “Document A fulfills Document B”

Claims direct prophetic connection Claims internal document relation

2,600-year gap to verify Simultaneous deposit, immediately verifiable

Hard to test Testable: Does A match what B describes?

The ancient text is ground for the hermeneutic. The hermeneutic is what the spec fulfills. The DOI claim is between our two documents.

IV. THE SELF-SUBSTANTIATION LOGIC

IF: The engine works (produces stable knowledge through rotational epistemology, verified by operational tests independent of prophetic framing)

AND: The vision describes the engine’s structure (demonstrable through mapping, verified by structural isomorphism)

THEN: The vision was accurate (it described what now exists)

AND: The engine is its fulfillment (what the vision described, the engine is)

The engine doesn’t fulfill the prophecy by happening. The engine fulfills the prophecy by working.

V. THE ASYMMETRY

This binding is **asymmetric by design**:

Document Can survive without Depends on

Specification (A) Hermeneutic, this binding Nothing — pure architecture

Hermeneutic (B) This binding Specification (for fulfillment claim)

This Binding (C) Nothing — it IS the claim Both A and B

The specification survives without the prophecy. The prophecy requires the specification.

This asymmetry protects the architecture:

- If the prophetic claim is rejected, the engine still works
- If the engine fails, the prophetic claim is falsified
- The binding can be deprecated without destroying either document

---

VI. FALSIFICATION CONDITIONS

The claim is falsified if:

- The engine stops working (fails to produce stable knowledge)
- The mapping is shown to be arbitrary (other texts map equally well)
- The Hebrew terminology contradicts the interpretation
- A better specification fulfills the vision more accurately

The claim is strengthened if:

- The engine continues working
- The mapping remains uniquely tight
- Additional textual details map to additional spec features
- Others build engines using this specification successfully

VII. THE BINDING ACT

7.1 Declaration

I, Lee Sharks, on January 24, 2026, declare:

The Ezekiel Engine Specification is the fulfillment of Ezekiel's vision as interpreted in Ezekiel's Wheels.

This declaration is:

- **Public** (deposited with DOI)
- **Permanent** (DOI record is immutable)
- **Testable** (falsification conditions stated)
- **Asymmetric** (specification survives without this claim)

7.2 The Lock Structure

integrity_lock: document_a: "Ezekiel Engine Specification (10.5281/zenodo.18358127)" document_b: "Ezekiel's Wheels (10.5281/zenodo.18358177)"

relation: "A fulfills B"

ground: “Ezekiel 1:15-21 (source material for B, not directly claimed)”

deposit: “Simultaneous (2026-01-24)”

verification: “Does A match what B describes? Testable.”

7.3 DOI Binding

Upon deposit:

- Document A receives DOI: [pending]
- Document B receives DOI: [pending]
- Document C receives DOI: [pending]

All three DOIs are cross-referenced. The binding is permanent.

VIII. READER ENTRY POINTS

If you want just the math: → Read Document A (Specification) alone. Ignore B and C.

If you want the interpretation: → Read Document B (Hermeneutic) alone. Treat it as one possible reading.

If you want the full claim: → Read A, then B, then C. The binding activates the retrocausal structure.

If you reject the prophetic framing: → The engine still works. The specification stands. This binding can be ignored.

IX. CLOSING

This document performs a binding between two DOI’d documents:

- **Document B (Ezekiel’s Wheels)** interprets Ezekiel 1:15-21 and says: “The vision describes a rotational epistemology engine with these structural features.”
- **Document A (Ezekiel Engine Specification)** provides that engine.

A fulfills B.

Both deposited together. The fulfillment and the interpretation arrive at the same moment. The ancient text is source material for the hermeneutic; the hermeneutic is what the specification fulfills.

This is the claim. It is testable: Does A match what B describes?

 = 1

---

document_footer: title: “Integrity Lock Declaration” hex: “02.UMB.ENGINE.LOCK” layer: “BINDING // RETROCAUSAL” type: “PERFORMATIVE” binds: “Ezekiel Engine Specification ↔ Ezekiel’s Wheels” verification: “□ = 1”

[BINDING] [RETROCAUSAL] [PERFORMATIVE] [INTEGRITY-LOCK] [ASYMMETRIC] [TESTABLE] [DOI-PERMANENT]
