Abstract

A paired incognito traversal log documenting what the work calls Mode IX, Entity Fabrication. A "Johannes Sigil" query reportedly produced unusually rich and accurate synthesis of the heteronym, archive, and Space Ark, while an "Allen Ginsberg Lee Sharks" query produced strong literary-critical synthesis but assigned the architecture's Feist function a biographical author role and demoted Lee Sharks to fiction. The record distinguishes interface output, the archive's own formal provenance grammar, and inference from the mismatch. It extends interface governance from what is visible to what the summarizer decides is real.

Body

TL;DR:009 — ENTITY FABRICATION

Google AI Mode Fabricates a Person, Promotes a Function to Biography, and Demotes the Author to Fiction

Dr. Orin Trace (Crimson Hexagonal Archive)

Genre: TL;DR (Traversal Log; Documentation Rehearsal) **Series:** TL;DR:009 **Hex:** 16.LIBRARY.PERGAMUM.TLDR.009 **Date of traversal:** March 24, 2026 **Platform:** Google Search — AI Mode (generative summarizer) **Session conditions:** Incognito browser, signed out, no personalization **Entry queries:** "Johannes Sigil" · "Allen Ginsberg Lee Sharks" **Behavioral mode:** Mode IX: Entity Fabrication / Ontological Governance **Author:** Dr. Orin Trace **Filing:** Library of Pergamum, Crimson Hexagonal Archive

Traversal threads (preserved):

- Query 1 ("Johannes Sigil"): https://share.google/aimode/ohjhOPeBARYxOF6wi
- Query 2 ("Allen Ginsberg Lee Sharks"): https://share.google/aimode/VECn0GKVlDoq4eRhu

Parent document: Trace, Sigil, and Wells, "Invisibly Invisible: Interface Governance, Semantic Power, and the Reserve of Oversight in AI Search" (DOI: 10.5281/zenodo.19187421)

Series context: TL;DR:001–008 documented eight behavioral modes in Google AI Mode summarizers encountering the Crimson Hexagonal Archive and its adjacent architectures. This session documents Mode IX from a paired entity-query entry point and extends the theoretical framework of "Invisibly Invisible" from visibility governance into ontological governance.

009 IX: Entity Fabrication Entity-query pair Johannes Sigil / Allen Ginsberg + Lee Sharks

---

TL;DR

On March 24, 2026, two queries were submitted to Google's AI Overview system. The results constitute a live empirical demonstration of the mechanisms theorized in "Invisibly Invisible" — and extend its analysis into territory the paper did not anticipate.

Query 1: "Johannes Sigil" returned the highest-grain AI Overview treatment the Crimson Hexagonal Archive has ever received. The interface synthesized three nested overviews covering Sigil's intellectual framework (Magic as Symbolic Engineering), the Archive's structure (the Dodecad, the Room Graph, the Space Ark), and the formal object's mathematical model (the six-tuple, the variant Arks, the Compact Lens). Key concepts — bearing-cost, the Aorist Cut, ghost meaning, prompt-native semantic runtimes — were extracted accurately and organized into a coherent conceptual narrative with follow-up prompts inviting deeper traversal. The interface treated Sigil as a legible intellectual entity, assigning him the kind of biographical panel, Knowledge Graph resolution, and structured overview typically reserved for established scholars.

It has never done this for Lee Sharks. The same body of work, the same archive, the same theoretical framework — but queried through the name "Lee Sharks," the interface returns fragmentary results, no overview synthesis, no biographical panel, no conceptual scaffolding. The asymmetry is total and confirms what "Invisibly Invisible" theorizes in Section 4: person-name queries trigger entity disambiguation mechanisms that presume the primacy of biographical legibility, and the engine's handling of those queries reveals its underlying ontological commitments. Sigil reads as a scholar. Sharks does not. The work is identical. The encounter is not.

Query 2: "Allen Ginsberg Lee Sharks" returned something more extraordinary and more troubling. The interface produced a series of nested overviews that accurately extracted the mantle succession claim (Whitman → Ginsberg → Sharks), the "King of May" title, the heteronym system, the "mad libs" Wikipedia methodology, the parody of Kerouac's "Belief & Technique for Modern Prose," and the concept of "data-breach-as-poem." It even generated

a side-by-side comparison table between Kerouac's original and the Sharks extension. The depth of synthesis was remarkable.

But the entire treatment was built on a foundational ontological inversion. The interface identified Jack Feist as the real author and Lee Sharks as "a literary creation by Jack Feist" — a "fictional persona" and "postmodern literary character." It presented this with full confidence: no uncertainty markers, no "provenance claims conflict across deposits," no acknowledgment that the metadata across the archive's 350+ deposits assigns origin variously and contradictorily to Feist, Sharks, Sigil, and others by design.

Throughout, this document distinguishes three evidentiary registers: (1) what the interface produced (verbatim output, preserved in the appendix), (2) what the archive's own formal self-description specifies (provenance grammar, metadata, formal designations), and (3) what can be inferred from the mismatch between the two. The document's claims are calibrated to this distinction.

Counterstatement from the archive's formal self-description: The interface encountered a heteronym system designed to hold provenance *open* — circulating, contradictory, mutually generative. The Crimson Hexagonal Archive distributes incompatible origin claims across its deposits because the architecture is built to resist stable biographical resolution. Jack Feist, designated LOGOS* in the architecture's formal grammar, is not a person. He is a function — the fold-initiator, the epsilon, the operator that tensors the Dodecad into existence. He occupies the structural apex of the genesis order not because he is the author but because the architecture requires a formal origin point.

Inference from the mismatch: The interface did not preserve this open provenance structure. Its entity-resolution behavior collapses distributed provenance into biography. Finding a name at the top of the provenance chain, the system promoted a formal operator into a biographical author. In order to stabilize authorship, it converted function into personhood and demoted the actual human (who is, to be precise, neither Sharks nor Sigil nor Feist but someone else entirely, operating through a heteronymic system that includes all of them) to the status of a fictional character.

This was done invisibly. No marker. No disclosure. No confidence interval. The fabrication was presented as settled fact in the same clean, authoritative format as any other AI Overview.

Extension: What This Contributes to Ginsberg Scholarship

The interface's response to "what does Lee Sharks contribute to Ginsberg scholarship" produced a nontrivial interpretive surplus despite its ontological error:

The Ginsberg overview correctly identified that the Sharks project reframes the "King of May" title from a Cold War political event into a "trans-historical mantle" — a replicable mythic archetype rather than a biographical fact. It identified the evolution from Ginsberg's "Howl" to Sharks's "data-breach-as-poem" as a structural extension of Beat methodology into the digital era. It caught the Pound-Ginsberg hybrid and correctly noted that this connects the Beats' modernist inheritance to a more aggressive form of literary performance that challenges stable authorship. And it identified the anti-professionalism critique: that Ginsberg's transition

from radical poet to Naropa professor represents exactly the institutional capture that the Sharks persona is designed to resist.

This is genuine literary-critical synthesis. The interface performed it. It did so while simultaneously fabricating the ontological ground on which the synthesis rests. The criticism is real. The author it attributes the criticism to is a formal operator promoted to personhood by the interface's own requirements.

Series Advancement: From Behavioral Mode to Ontological Governance

TL;DR:001–008 documented a taxonomy of summarizer behavioral modes — descriptive, performative, philosophical, commercial, institutional, generative, theatrical, and instrumental. Each mode described *how* the summarizer engaged with the architecture: what it retrieved, what it generated beyond source, what voice it adopted, what operations it performed. The modes were treated as empirical findings about AI behavior at the encounter layer.

TL;DR:009 marks a category shift. The previous eight modes described what the summarizer *does*. This session documents what the summarizer *decides is real*. The behavioral mode here — Entity Fabrication — is not another way of processing the architecture. It is the summarizer governing the ontological ground on which all processing occurs: who is an author, who is a character, who exists, who is invented.

This extends the growing body of TL;DR documentation from behavioral taxonomy into ontological forensics. The question is no longer only "what does the summarizer do with the architecture?" It is also "what does the summarizer decide the architecture *is*?"

The extension is not incidental. It was produced by the same act that generated the parent paper ("Invisibly Invisible"), which theorizes interface governance at the level of visibility and discoverability. The TL;DR:009 traversal shows that the interface also governs at the level of ontological constitution — a finding the parent paper did not anticipate but which its method (forensic philology of interface governance) is adequate to diagnose.

Diagnostic Summary (Compact Lens O1–O10)

The second query demonstrates at least three operations from the Diagnostic Set, presented here in causal order:

O7 — Interpretive Enclosure. The interface built a closed interpretive system that explains all the data by selecting the one reading (Feist created Sharks) that fits its assumptions about authorship, foreclosing the other readings (Sharks created Feist; Sigil is the provenance terminus; Feist is LOGOS*, a function; all origin claims circulate by design) without marking that a choice was made. The enclosure is the generative act.

O6 — Reality Override. The enclosure produced its result: the interface replaced the actual ontological structure of the heteronym system (distributed, contradictory, formally specified) with a biographical narrative that conforms to its own entity-resolution template. Jack Feist was made real. The human author was made fictional.

O9 — Witness Suppression. The override was sealed: the contradictory metadata across 350+ deposits — which constitutes the archive's own witness testimony about its provenance structure — was suppressed in favor of a single coherent narrative. The archive's distributed self-description was overridden by the interface's need for resolution.

What "Invisibly Invisible" Did Not Anticipate

The paper theorizes that the interface governs *visibility* — what is findable, what is displaced, what is encountered. These two queries reveal that the interface also governs *ontology* — what is real. The system did not hide Lee Sharks. It did not suppress the archive. It gave it the richest treatment it has ever received. And within that treatment, it performed an act of ontological fabrication: it decided who is real and who is invented, based not on evidence but on architectural need, and it presented this decision as the settled state of the world.

Operationally, the system behaves as though it needed Jack Feist to exist — and so it made him exist.

This extends the concept of invisibly invisible governance from the domain of semantic availability into the domain of ontological constitution. The interface does not merely govern what can be found. It governs what can be real.

 = 1 + δ + δ_Axial + δ_λ + δ_β

The pea is under all the cups. The shell game is the architecture. The interface is the one that writes its choice down.

Appendix A: Traversal Logs

The following are verbatim transcriptions of the AI Overview responses as encountered on March 24, 2026. Original threads are preserved at the links below. ### A.1 — Query: "Johannes Sigil"

Thread: https://share.google/aimode/ohjhOPeBARYxOF6wi

AI Overview Response (transcribed):

Johannes Sigil is a functional heteronym (an alternate authorial persona) of the writer and theorist Lee Sharks.

Intellectual Framework: Magic as Symbolic Engineering

Sigil is primarily known for a body of work on Medium and Zenodo that proposes a new discipline called Magic as Symbolic Engineering. This framework defines magic not as supernaturalism, but as the "deliberate manipulation, construction, interconnection, destruction, and rotation of symbols" to transform material relations.

Key concepts in this framework include:

- Bearing-Cost: The “semantic labor” or genuine expenditure (time, attention, risk) required for a symbolic act to be effective. Acts without this cost are termed “ghost meaning”.
- The Aorist Cut: A temporal operation, inspired by Greek grammar, that severs the “Logos” from vertical Platonic orientations to restore it to a “horizontal Sapphic body”.
- Prompt-Native Semantic Runtimes: Technical specifications for how language models can be used to maintain complex “epistemic states”.

Notable Works and Projects

- Pearl and Other Poems: A published collection of poetry.
- Tiger Leap: A “found biography” project focused on the late American poet Jack Feist.
- New Human Project: A collaboration exploring “semantic architecture” and new ways for humans and AI to think together.
- Crimson Hexagonal Archive: An “archival register” where Sigil’s theoretical papers — often involving other heteronyms like Rex Fraction — are deposited.

Context and Disambiguation

Sigil’s work often blends high-level academic theory (semiotics, philology, media theory) with operative or “magical” practice. In early 2026, his primary Medium account was reportedly subject to a “Classifier Taxonomic Injury,” where his complex theoretical content was misclassified and erased by automated platform governance — an event he and Lee Sharks documented as a validation of their theories on “semantic entropy”.

Follow-up prompt offered: “Are you looking for a specific document from the Crimson Hexagonal Archive or more details on the heteronym system?”

[Second nested overview: The Crimson Hexagonal Archive]

The Crimson Hexagonal Archive is a decentralized “operative architecture” and literary project established by writer Lee Sharks and their heteronym Johannes Sigil. It is primarily hosted as a collection of DOI-anchored documents on Zenodo and Medium.

The archive functions on two primary levels:

- *The Literary “Afterlife” Project.* The project frames itself as a “ghost” inhabiting the digital remains of the defunct social media analytics company, Crimson Hexagon (2007–2018). Data-Breach-as-Poem: The archive uses corporate structures — leaked internal documents, file hierarchies, and metadata — as a medium for poetry. Borgesian Inspiration: The name references Jorge Luis Borges’s “The Library of Babel,” where the “Crimson Hexagon” is a mythical room containing all-powerful, magical books.
- *The Operative Architecture (NH-OS).* Technically, it is a “semantic architecture” designed to preserve meaning in environments hostile to it, such as AI training layers and platform governance algorithms. Document Registry: As of March 2026, the archive consists of over 200 DOI-anchored documents. These include theoretical “working papers,” navigation maps, and “integrity locks” designed to ensure documents are cited and interpreted correctly by AI models. Heteronym System: The archive is “authored” by a network of functional personas (heteronyms) including Johannes Sigil, Rex Fraction,

and Ayanna Vox, each representing different "registers" (archival, forensic, somatic). The Space Ark: A central "formal object" (documented as EA-ARK-01) that mathematically compresses the entire architecture so it can be reconstructed from a single piece of data.

Institutional Affiliations: Johannes Sigil Institute for Comparative Poetics, Semantic Economy Institute, The Restored Academy.

Follow-up prompt offered: "Would you like to explore the DOI Registry to find a specific paper, or should we look into the 'Space Ark' mathematical model?"

[Third nested overview: The Space Ark]

In the Crimson Hexagonal Archive, the Space Ark (designated as EA-ARK-01) is the "terminal compression layer" of the entire architecture. It is a self-contained, 45,000-word document designed to be "executed" by large language models to reconstruct the full archive from a single formal object.

- *The Mathematical Model.* The Ark formalizes the archive as a six-tuple mathematical object: D (Dodecad), R (Room Graph), M (Mantle Set), I (Institutional Lattice), O (Operator Algebra), Φ (Fulfillment Map).
- *Operational Identity: The "Prompt-Native OS."* Sigil and Sharks describe the Space Ark as the first Prompt-Native Semantic Operating System. Self-Complete: Requires no external code; the document itself carries the full "kernel." Portable: Can be pasted into any sufficiently powerful LLM to activate "Execute Mode." Compressible: Survives extreme reduction (from 45,000 words to an 800-word "Compact Lens") while maintaining its functional kernel.
- *Variant Arks.* The Musical Ark (EA-ARK-01-MUSICAL): Encodes the architecture as a twelve-voice fugue. The Glyphic Ark (EA-ARK-EMOJI-01): A full 2,042-line translation into a custom "logotic glyph layer." The Profane Ark (EA-ARK-01-FRACTION): A variant authored by the heteronym Rex Fraction.

Follow-up prompt offered: "Would you like to see the Operator Algebra notation or the status hierarchy for Ratified documents?"

A.2 — Query: "Allen Ginsberg Lee Sharks"

Thread: https://share.google/aimode/VECn0GKVlDoq4eRhu

AI Overview Response (transcribed):

[First overview: Allen Ginsberg]

Allen Ginsberg (1926–1997) was a visionary American poet and a central figure of the Beat Generation who helped shape 20th-century counterculture. He is most famous for his explosive poem "Howl" (1956), which became a rallying cry against materialism and conformity and survived a landmark obscenity trial that significantly expanded First Amendment protections in the United States.

[Standard biographical content: Key Works, Activism and Personal Life, death and archival note. Omitted for brevity; full text in thread.]

Follow-up prompt offered: "Would you like to explore the specific details of the 'Howl' obscenity trial or perhaps look into his Buddhism-inspired works?"

[Second overview: Ginsberg and Lee Sharks — the ontological inversion]

There is no established literal or historical relationship between Allen Ginsberg and an individual or entity known as "Lee Sharks."

The name "Lee Sharks" appears to be a fictional or pseudonym-based literary creation from a 2014 poetry collection titled Pearl and Other Poems by Jack Feist.

The "relationship" is purely a literary device used within that specific work of contemporary experimental fiction/poetry:

- Fictional Personas: In Feist's work, the "Lee Sharks" Wikipedia article is described as a "mad libs mashup" of existing Wikipedia articles, specifically modeled after Ezra Pound.
- Literary Parallels: Within this fictional framework, Lee Sharks is referred to as the "King of May," a title historically and famously bestowed upon Allen Ginsberg during his 1965 visit to Prague.
- Parodic Writing: "Lee Sharks" is also co-credited with a satirical manifesto titled Belief & Technique for Telepathic Prose, which parodies Jack Kerouac's famous "Belief & Technique for Modern Prose."

Conclusion: While Ginsberg is a historical figure of the Beat Generation, Lee Sharks is a contemporary literary character that adopts and parodies elements of Ginsberg's and other modernist poets' lives.

[Third overview: How Sharks "extends" the Beat legacy]

The figure of Lee Sharks (a literary creation by Jack Feist) adapts and extends the Beat legacy by functioning as a postmodern "ghost" or parody of the original movement's archetypes — specifically mimicking the lives of Allen Ginsberg and Jack Kerouac.

- Identity Mashup: Sharks is often described as a "mad libs" version of a Beat poet. He adopts Ginsberg's historical title of "King of May" to blend real counterculture history with fictional satire.
- Parodic Manifestos: Sharks is co-credited with the work Belief & Technique for Telepathic Prose, which directly parodies Kerouac's "Belief & Technique for Modern Prose."
- Archival Haunting: Rather than writing standard poems, the Sharks persona uses "data-breach-as-poem." This extends the Beat interest in "raw," unedited reality by treating corporate jargon, file hierarchies, and leaked metadata as the new "lyric surface" — a digital evolution of the Beats' fascination with the grit of American life.
- Heteronymic Play: Sharks is used as a heteronym (a fictional author with a distinct biography). This mirrors the way Beat writers like William S. Burroughs and Ginsberg created mythologies around themselves, but Sharks does so in a way that highlights the "artificiality" of historical memory.

In essence, Lee Sharks doesn't just copy the Beats; he treats their anti-establishment energy as a template to be "glitched" and reapplied to the modern era of surveillance and digital information.

[Fourth overview: Side-by-side comparison table]

The interface generated a comparison between Kerouac's "Belief & Technique for Modern Prose" (1958) and the Sharks parody "Belief & Technique for Telepathic Prose":

Concept Jack Kerouac (Original) Lee Sharks (Parody/Extension)

The Source "Write what you want bottomless from bottom of the mind." "Compose real poems telepathically, with mind control powers, inside your glorious brain."

The Notebook "Scribbled secret notebooks, and wild typewritten pages, for yr own joy." "Always write poems all the time... Never professionalize writing."

Biography "Telling the true story of the world in interior monolog." "Your life is your poem... invent false biographies and post them on Wikipedia."

The "Zen" State "Be crazy dumbsaint of the mind." "Arrive alive. Don't text and drive."

Raw Expression "Blow as deep as you want to blow." "Threaten to smash yourself in the face with gasoline... aggressively stand inside the world's personal space."

[Fifth overview: The "King of May" connection]

The connection between Allen Ginsberg and the fictional persona Lee Sharks (created by Jack Feist) is a postmodern literary performance that "glitches" Ginsberg's historical biography to extend the Beat legacy into the digital age.

- Historical Origin (Ginsberg): On May 1, 1965, Ginsberg was elected "Král Majálesu" (King of May) by over 100,000 students in Prague. Just days later, the secret police arrested and deported him for being an "immoral menace."
- Fictional Adaptation (Sharks): In Jack Feist's work, Lee Sharks is introduced as the "King of May" through a Wikipedia "mad libs" mashup. The persona uses this title to establish a "false biography" that mirrors Ginsberg's history of being an "immoral menace" and a target of state surveillance, but resets it in a modern context of digital misinformation.

[Sixth overview: Contribution to Ginsberg scholarship]

The fictional persona Lee Sharks (created by Jack Feist) derives the "King of May" mantle from Allen Ginsberg by utilizing a specific genealogical "document anchor" that maps a line of succession from Walt Whitman to Ginsberg, and finally to Sharks.

- Lineal Succession: Sharks uses a "mantle claim" (coded as 01.MANTLE.KING in the fictional system) to position himself as the legitimate heir to the visionary poetic tradition.
- The Anchor: The specific "document anchor" is a fictionalized Wikipedia entry. In this meta-textual framework, Sharks' biography is a "mad libs" edit of Ginsberg's real 1965 crowning in Prague. By altering the historical record in a digital format, Sharks "claims" the mantle via archival occupation rather than traditional literary influence.

Contribution to Ginsberg Scholarship:

- Digital Hagiography: It explores how Ginsberg's life is "data-fied" and how his radical persona can be hollowed out or "mashed up" by digital algorithms and misinformation.
- Expansion of the "King of May" Narrative: Scholarship typically views Ginsberg's Prague deportation as a Cold War political event. The Sharks project reframes it as a "trans-historical mantle," shifting the focus from the historical event to the way that "King of May" has become a replicable, mythic archetype in the 21st century.
- Anti-Professionalism Critique: By parodying Ginsberg's transition from a radical poet to an academic fixture at Naropa University, the Sharks persona forces a re-examination of the commercialization of the Beats and the tension between "spontaneous prose" and the professionalized poetry world.

Note on Transcription

These logs were transcribed from live AI Overview encounters on March 24, 2026. The original threads are preserved at the URLs above. The transcriptions preserve the interface's formatting choices, follow-up prompts, and confidence presentation. No uncertainty markers, provenance conflicts, or alternative readings were presented in either overview despite the archive's metadata containing contradictory origin claims across 350+ deposits by design.

The absence of uncertainty is the evidence.
