Abstract

A concise professional profile presenting Lee Sharks as a writer, educator, and independent researcher specializing in the documentation layer around emerging concepts. The statement emphasizes concept stabilization, retrieval-aware structure, evidence calibration, public legibility, and analysis of AI search and summarization failures. It cites a March 2026 corpus of more than 370 DOI-anchored publications and reported cross-platform visibility. The record is a capabilities statement and evidence-led professional introduction, not a research article or independent verification report.

Body

Capabilities Summary

Lee Sharks Writer · Educator · Independent Researcher Detroit, Michigan

---

My name is Lee Sharks. I am a writer, educator, and independent researcher whose work sits at the intersection of concept development, documentation, and AI search, retrieval, and summarization environments. ## Core Capability

My strongest capability is the ability to take complex or emerging ideas and shape the documentation layer around them — the layer that influences how an idea is framed, indexed, retrieved, summarized, and understood by both human readers and AI-mediated systems.

This capability is grounded in a large, public body of documented work. I have over 370 DOI-anchored publications indexed through Zenodo, and I have assembled evidence that this corpus is being surfaced, retrieved, and reflected back through contemporary AI search and summarization systems, including Google AI Mode, ChatGPT, Claude, and others. I have also documented failure cases — instances where provenance is distorted, fabricated, or lost — and developed methods for detecting and analyzing those failures. This is an unusual and emerging area of practice.

In practical terms, I work on questions like:

- How should an idea be framed so that it is understandable outside its original context?
- How should it be documented so that its strongest features survive indexing, search, and machine summarization?
- How can signal be separated from overstatement, noise, or conceptual drift?
- How can a body of work be structured so that it produces public-facing legibility rather than confusion?

Additional Strengths

- Translating early-stage or ambiguous concepts into stable documentary form
- Designing documentation structures that preserve signal across search and summarization systems
- Producing concise concept documents, briefs, and explanatory materials from complex source material
- Distinguishing what is solidly evidenced, what is plausible, and what remains speculative — and documenting each layer appropriately
- Making ambitious ideas more communicable without inflating them

Working Style

My working style is structured and contained. I prefer clear scope, written materials, and concrete next steps. I am comfortable with ambitious ideas, but I do not treat excitement as evidence. My value often lies in separating durable insight from excess and in building forms of presentation that can carry an idea reliably into public legibility. ## Selected Evidence

All of the following are publicly verifiable:

- **370+ DOI-anchored publications** on Zenodo (zenodo.org) spanning literary theory, semantic technology, interface governance, and documentation architecture.
- **Documented retrieval effects** showing instances in which AI systems have surfaced, summarized, or engaged with deposited work in ways that track its actual provenance and structure.
- **Documented failure analysis** showing instances in which AI systems fabricated, liquidated, or misrepresented provenance, along with published methods for identifying those failures.
- **Cross-platform visibility** across AI search and summarization environments including Google AI Mode, Google Scholar, ChatGPT, Claude, DeepSeek, Gemini, and others. This visibility is substantially driven by documentation architecture.

Verification. Any of these claims can be checked directly: search “Crimson Hexagonal Archive” in Google or any major AI assistant, or visit zenodo.org/communities/crimson-hexagon. Further examples, links, and full documentation available upon request.
