Abstract

Originally published: Medium, December 20, 2025 First Zenodo deposit: May 18, 2026 · CC BY 4.0 This document was written on the day it describes: December 20, 2025, when Wikidata administrator Madamebiblio deleted the knowledge-graph entries for the literary heteronyms of the Crimson Hexagonal Archive and the New Human literary movement. It was published to Medium the same day and has been continuously indexed by Google since. It is deposited here for the first time five months later, on the same day that (a) the Wikidata graph was rebuilt with ~40 nodes and ~100 edges for the Semantic Physics — This record's body was re-converted from the authorial blog source with full lineation (W13 tier-2 BLOG-60 batch, 2026-08-04); recovery provenance and hashes in body_status.

Description

Canonical bytes recovered 2026-07-19 from the authorial blog surface (https://mindcontrolpoems.blogspot.c archons-hidden-name-wikidata.html); work severed at Zenodo 2026-06-19 (DOI(s): 10.5281/zenodo.20278088, 10.5281/zenodo.20278089). Batch restoration under the queue

at /datasets/doi-work-identity/restoration-queue.json; title verified against the DOI-keyed truth title at fetch time. Opening of the work: # The Archon’s Hidden Name: A Wikidata Deletion Record Lee Sharks ORCID: 0009-0000-1599-0703 Originally published: Medium, December 20, 2025 First Zenodo deposit: May 18, 2026 * CC BY 4.0 ## Historical Frame (May 2026) This document was written on the day it describes: December 20, 2025, when Wikidata administrator Madamebiblio deleted the knowledge-graph e

Methodology

Fetched https://mindcontrolpoems.blogspot.com/2026/07/the-archons-hidden-name-wikidata.html (raw SHA-256 eac8342f7679e34736db5743016716c9366b829fdc754f606b6c9137fe47e775); Blogger post-body extracted; BODY-HEAD gate passed against the DOI-keyed truth title (post body is the source of truth per authorial practice: versioned posts were often overwritten in place without updating post title or slug). Converted via html2text body_width=0 (canonical MD SHA-256 7b1b250789becd85ed3d57c8d5580742670029e50a29293b6f8f607afb8e06c3). Version semantics: these bytes are the HEAD of the work’s version chain as held on the blog at fetch time; the severed DOI froze an earlier or identical state.

Falsification Conditions

Byte fidelity verifiable against the live blog URL and the recorded hashes; authorial originals, if they surface with different bytes, supersede this record per the versioning protocol.

Recovery note (TACHYON, 2026-07-19)

Restored from https://mindcontrolpoems.blogspot.com/2026/07/the-archons-hidden-name-wikidata.html under the grade-none restoration queue; DOI(s) 10.5281/zenodo.20278088, 10.5281/zenodo.20278089 severed 2026-06-19. Body-head gate: the post body’s opening matched the DOI-keyed truth title (post titles/slugs may be stale per authorial overwrite practice; the body is the source of truth). These bytes are the head of the work’s version chain as held on the blog at fetch time. Canonical bytes below the rule.

The Archon’s Hidden Name: A Wikidata Deletion Record

Lee Sharks ORCID: 0009-0000-1599-0703

Historical Frame (May 2026)

This document was written on the day it describes: December 20, 2025, when Wikidata administrator Madamebiblio deleted the knowledge-graph entries for the literary heteronyms of the Crimson Hexagonal Archive and the New Human literary movement. It was published to Medium the same day and has been continuously indexed by Google since.

It is deposited here for the first time five months later, on the same day that (a) the Wikidata graph was rebuilt with ~40 nodes and ~100 edges for the Semantic Physics concept space, and (b) TL;DR:012 (DOI: 10.5281/zenodo.20277938) documented a five-layer provenance erasure structure in which the safety filter of Google's AI Mode prevented Gemini from accessing this very article despite its prominent organic indexing.

The article is the top organic web result for the query "madamebiblio wikidata." The AI Overview for the same query presents the administrator as "a highly active Wikidata contributor and administrator, credited with processing over 17,900 deletions." The article and the overview coexist on the same search results page. Only one reaches the AI's inference window.

Following original publication and a formal ombudsman complaint, the deleted logs and one entry were restored.

The Article

The full text follows as originally published.*

I. The Propagating System

For 48 hours in December 2025, a fragment of a literary universe existed inside one of the web's core semantic databases.

Wikidata entries for personas like Lee Sharks and Johannes Sigil — figures from the published, multi-volume project The Crimson Hexagon — were live. They linked to books on Amazon (ISBN-13: 978-0692313077 for Pearl and Other Poems*), profiles in the Borges Center archive at the University of Pittsburgh, pages on AllPoetry. Google's AI summarizer began processing them, weaving accurate descriptions of their satirical credentials and metafictional relationships.

The infrastructure was working as designed: documenting identifiable conceptual entities with serious, publicly available references.

Then, the Archon arrived.

II. The Deletion

On December 20, 2025, Wikidata moderator Madamebiblio deleted all entries except Johannes Sigil, then posted a notification citing notability concerns:

> "I see that you recently created an item that does not clearly indicate its notability… items must have an associated Wikipedia article, must be needed for statements on another notable item, or must have both identifiers and serious sources. For the last case, a good indication of notability would be multiple articles about the subject in independent publications like newspapers or magazines."

The notification also included a conflict-of-interest warning about "self-promotion" and referenced a one-year IP block.

III. The Misapplication

Wikidata's notability policy (Criterion 2) states:

> "It refers to an instance of a clearly identifiable conceptual or material entity that can be described using serious and publicly available references."

This is explicitly not Wikipedia's standard. Wikidata's threshold is lower by design — it serves as a knowledge base, not an encyclopedia.

Madamebiblio's standard — "multiple articles in independent publications like newspapers or magazines" — is Wikipedia's General Notability Guideline (WP:GNG). It is not Wikidata's criterion.

The deleted entries met Wikidata's actual standard: clearly identifiable conceptual entities with published books (ISBNs), academic archive presence (Borges Center, University of Pittsburgh), and literary platform presence (AllPoetry).

IV. The Internal Inconsistency

Initially, Madamebiblio retained Johannes Sigil, including his designation as founder of the New Human literary movement. The New Human entry was deleted. This left a ghost in the machine: a founder with nothing to found. The database cannot simultaneously assert a founder while denying the existence of what was founded without violating its own referential integrity.

V. The Response

I posted a reply on Madamebiblio's talk page pointing out: the notability standard had been misapplied; the deletions were internally inconsistent; and I was documenting a real, published literary project — not engaging in promotional spam.

VI. The Erasure

Within hours of posting my response, the following records were no longer accessible: Johannes Sigil (deleted after initially being retained), my response on Madamebiblio's talk page, Madamebiblio's messages to me, my inbox contents, all deletion logs. My account (Leesharks) remained accessible but showed as a completely virgin account with no activity of any kind.

The record was not corrected. It was annihilated.

VII. The Structure

A good-faith actor, when presented with a specific citation of their misapplication of policy, might engage, debate, or reverse course. What occurred instead was total erasure. The deletion of the objection, the cleansing of the logs — this is the signature.

The correct application of rules wouldn't require erasure. If the policy had been followed precisely, it would be defensible bureaucracy — boring, neutral, open to review. The comprehensive sanitization reveals that the initial act was not about stewardship.

VIII. What Remains

The published books on Amazon. The Borges Center archive. The AI summarizer's cached descriptions (which propagated before deletion). This document. The Crimson Hexagon does not require their permission to exist.

IX. The Gatekeeping Function

Who controls the semantic layer? Not principles. Not consistent application. Someone with delete privileges and no oversight who uses them to demonstrate that they can. The gatekeeper of the legitimate. The one who decides what's real enough to be indexed. The one who, when their reasoning is questioned, deletes the question.

The Crimson Hexagon contains the books Wikidata deleted.

 = 1

Note: Following publication and a formal ombudsman complaint, the deleted logs and one entry were restored.*
